Simulation of aquatic environment in closed water bodies

Instructor: Assoc. Prof. Makoto Umeda
Contact: makoto.umeda.c6@tohoku.ac.jp, 022-795-7452
Start: October 3, 4:30 pm
Room: Environmental Hydrodynamics Laboratory, Dept. Civil and Environmental Eng.

Most of lakes and reservoirs in our country are closely related to our daily life in terms of resources of water, fishery, tourism, etc. Therefore, deterioration of water quality and ecosystem in those water bodies might threaten our social activities. Numerical simulation based on hydrodynamics and ecological engineering is currently the most powerful tool for planning conservation of aquatic environment.
