

Architecture on the Mountains

Contact: Associate Prof. Junichiro HIGAYA
022-795-5025
junichiro.higaya.d7@tohoku.ac.jp
Capacity: 12

Schedule: 2nd Semester, Thursday, 5th Period

The First Lecture; Oct. 6, 16:30-

Place: Building of Civil Engineering and Architecture, Room 104

Place and Program may be changed depending on the BCP level.

Summary:

Because architecture is site-specific, even if several buildings of the same form exist, they often give very different impressions because they are located in various places. This is easy to understand if we consider the case of urban and rural areas, or Japan and foreign countries. This lecture aims to discuss the relationship between architecture and place by taking up mountains, hills and sloping lands as examples of special sites, visiting buildings in the suburbs of Sendai and studying mountain architecture in Japan and abroad.
