System development using generative AI

Practicing system development that is useful for student life, education, and business using generative AI. System construction utilizes Python and generative AI APIs.

Aiming to build a system that effectively utilizes generative AI, explores the issues that society is seeking, and contributes to solving them.

> scan image01 > object
> search object > objects_list[]
> print objects_list[]
apple, grape, banana, Pineapple, melon, strawberry, persimmon, pear

Schedule of experiment

Guidance

↓

Basic training of OpenCV and API linkage using Python

↓

Survey and make target

↓

Practical experiment・System implementation

↓

Presentation
