

2025FY Term-based Engineering for Invention

Creating a new method for disaster education and tradition

Assoc. prof. Shosuke Sato, Prof. Fumihiko Imamura and Assoc. prof Anawat Suppasri
e-mail: shosuke.sato.a7@tohoku.ac.jp
Dept. of Civil Engineering and Architecture, Tsunami Engineering Lab.

【Purpose】

Disaster education is being conducted in various ways for various people. In addition, in areas affected by major disasters, disaster traditions are also actively conducted to learn about events that occurred in past disasters. In this course, participants will learn about examples of disaster education and disaster traditions conducted in areas affected by the GEJE through lectures and visits, and then create and design ideas for more effective and new methods of disaster education and disaster traditions. At the end of the training, the presentations will be listened to by not only the instructor in charge but also facility personnel, who will review and comment on them. Excellent ideas will be implemented in facilities, etc.

【Schedule】

3rd quarter, basically every Monday from 16:20

- 10/6 (Mon): Orientation, schedule adjustment
- Excursion (2 times)
Getting to know the site (Ishinomaki area)
Getting to know the site (Kesennuma area)
*Schedule adjustment required
Travel expenses at own expense
- 11/10 (Mon): Group discussion
- 11/17 (Mon): Presentation preparation
